SITUATION SUMMARY

Hurricane Matthew

Emergency Management Assistance Compact (EMAC)

- Cal OES staff are currently monitoring resource requests being submitted under the Emergency Management Assistance Compact (EMAC) process from the states of Florida, North Carolina, South Carolina, and Virginia in support of preparations for Hurricane Matthew.
- California is currently filling a request for a 3-person EMAC A-Team (also known as an EMAC “Advance” Team), with a likely deployment of two weeks, to support Florida’s State Emergency Operations.
- Other fellow EMAC member states are also responding to requests from the affected states, and coordination nationwide in support of Hurricane Matthew continues to be ongoing.
- Additional information on the EMAC process can be found here: <http://www.emacweb.org/>

Federal Emergency Management Agency (FEMA)

- The FEMA National Watch Center is at Enhanced Watch (24/7).
- FEMA has established Incident Support Bases at Fort Bragg/Pope Airfield, North Carolina; Albany, Georgia; and Fort A. P. Hill, Virginia.
- The National Incident Management Assistance Team (IMAT)-West deployed to Region IV.
- Two Regional IMATs deployed to Regions III and IV.

Activations

- The Florida, South Carolina, and Georgia State Emergency Operations Centers are at Full Activation.
- North Carolina remains at Partial Activation.

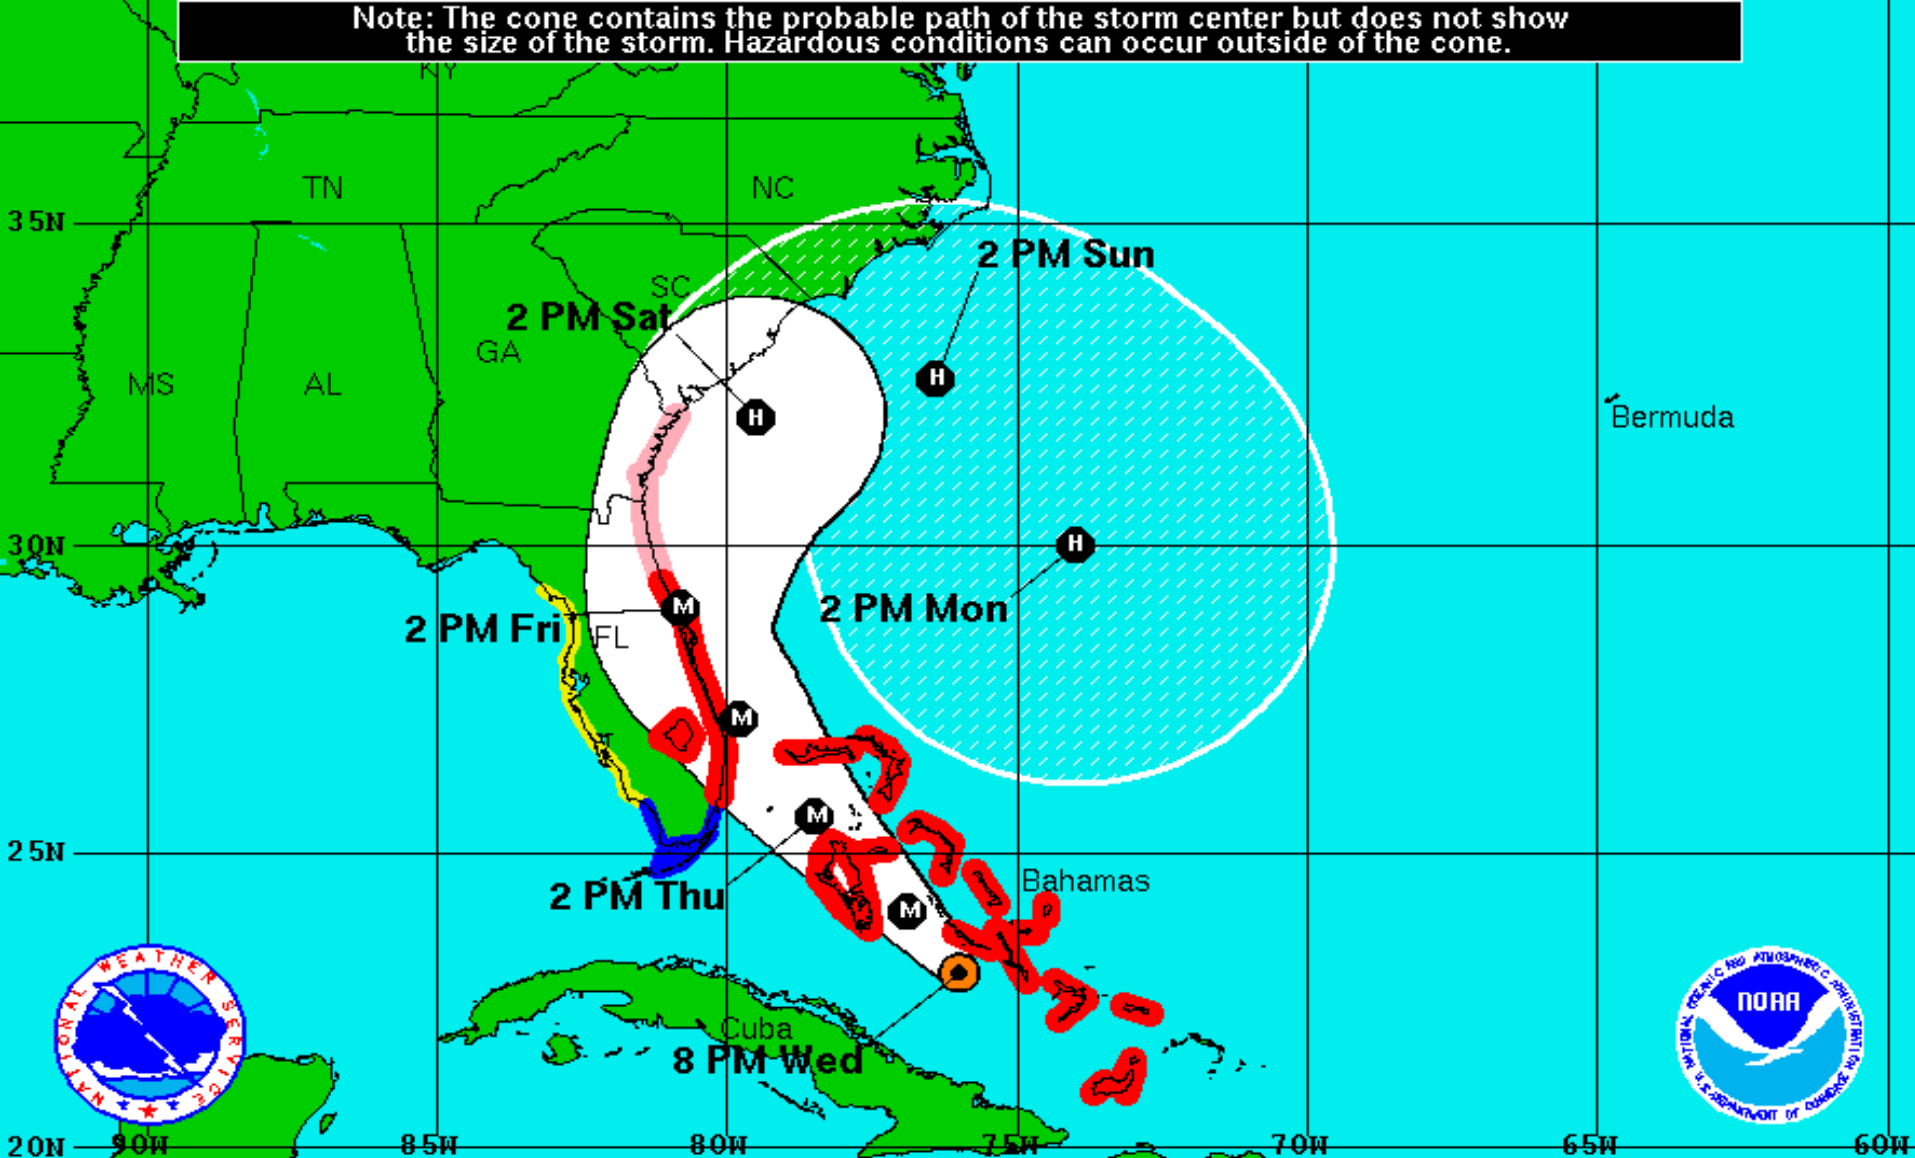

National Hurricane Center

- Hurricane Matthew remains a Category 3 hurricane and continues a northwestward track, with some strengthening forecast.
- Hurricane Matthew is forecast to remain a major hurricane (Category 3 and above) as it moves across the Bahamas and nears the east coast of Florida on 10/06/16.

WIND: Maximum sustained winds are 120 (-5) mph, with higher gusts. The estimated minimum central pressure is 28.44 (+0.03) inches. Hurricane-force winds extend out to 45 miles from the storm’s center, and tropical-storm-force winds out to 175 miles from the center.

RAINFALL: Matthew is expected to produce 4 to 7 inches of rain in the upper Florida Keys northward to coastal east-central Florida with isolated amounts up to 10 inches. Middle to lower Florida Keys should expect 1 to 3 inches with isolated amounts up to 5 inches.

Note: The cone contains the probable path of the storm center but does not show the size of the storm. Hazardous conditions can occur outside of the cone.

WEATHER SYNOPSIS BY REGION

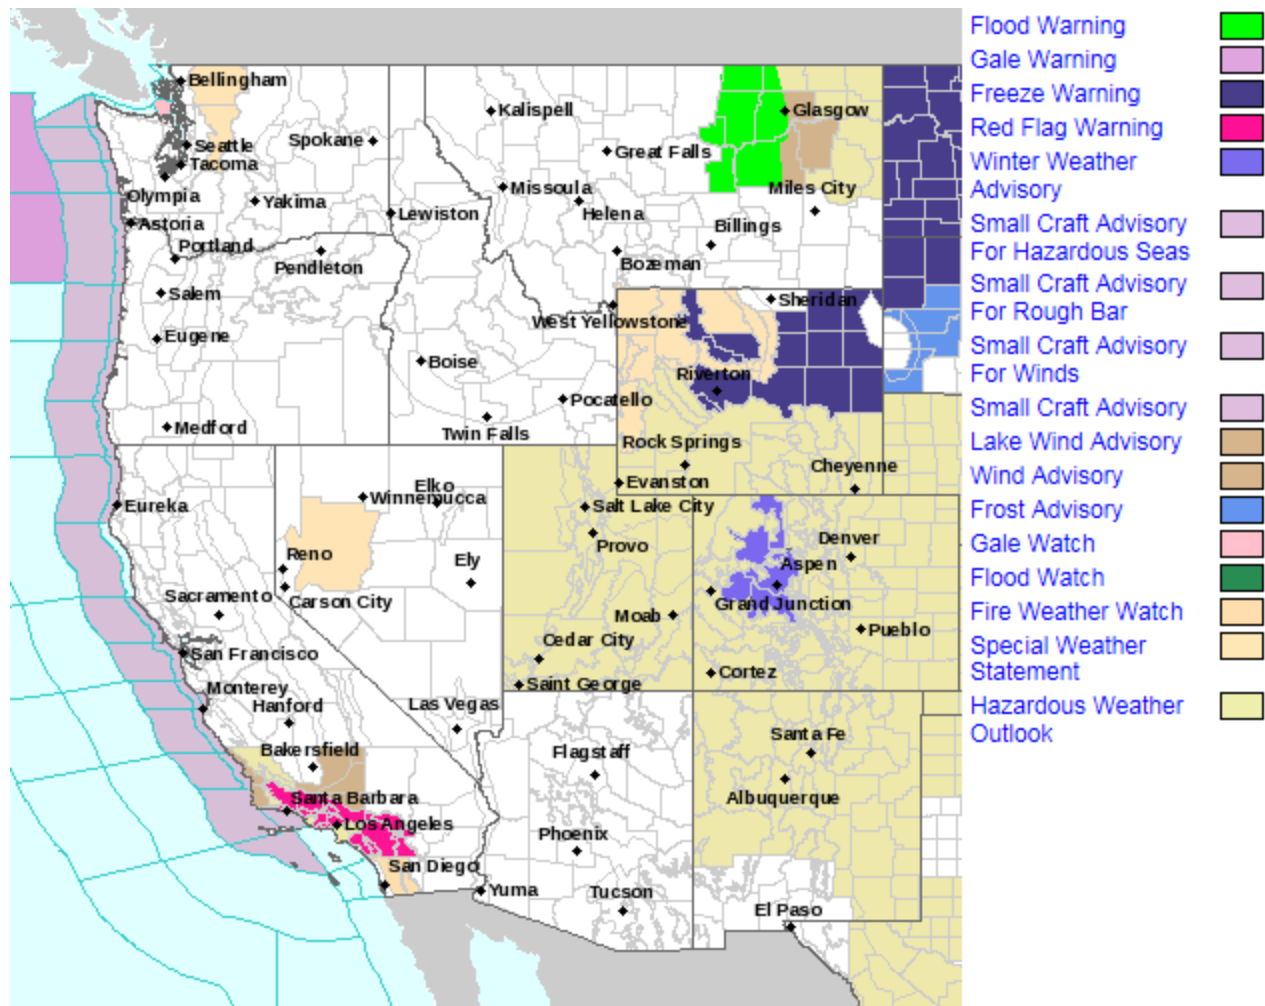

NORTHERN CALIFORNIA

The southern edge of a weather system moving through the Pacific Northwest will sweep across the northern portion of the Geographic Area today with some cloudiness and a few possible showers. The rest of the region will see some cloudiness on the mountains and sunny elsewhere. A high pressure ridge will start to take over our weather pattern tonight, but it won't become all that strong. Some northerly winds will develop during the day Thursday for the Sacramento Valley and its surrounding foothills, but speeds will be quite modest with gusts mostly around 25 mph, perhaps locally around 30 mph for a few hours. No High Risk conditions are expected. Dry, warm conditions will continue Friday through the weekend, although a low pressure trough will approach the coast later Sunday. The warmest days will be Friday and Saturday with afternoon highs in the inland areas 85-90, or from 5-10 degrees above seasonal normals. A cooling trend will start again Sunday in response to the approaching trough that will move ashore Monday but it looks like a dry system. A stronger trough will approach Tuesday with another round of more widespread precipitation for at least the northern two-thirds of the region expected by later next Wednesday. Temperatures will once again drop to below normal values with that system. Some gusty southerly winds are likely to develop early next week as well.

SOUTHERN CALIFORNIA

A trough passing to our north will generate gusty offshore winds with hot temperatures and low relative humidity (RH) later this week into the weekend. Early this morning, some wind gusts to 35 mph were already occurring in northern Los Angeles County along the I-5 Corridor and in the western Antelope Valley. Expect these winds to increase to 20-30 mph with gusts to 50 mph this afternoon. Gusty winds will expand to include much of the Kern County Mountains, "Canyon Country" and the Santa Clarita Valley by this evening. Similar conditions can be expected in Santa Barbara County. Once the marine layer dissipates later this morning, expect sunny and warmer conditions for the entire area. Highs will be 3-5 degrees warmer with afternoon temperatures in the 70s along the coast to the 80s in the valleys and lower foothills. Tonight, winds will remain gusty overnight and RH may drop through the night, possibly reaching the 10-15% range over many areas by daybreak Thursday. Expect highs close to 90 in some off the valleys and lower foothills Thursday with minimum RH in the single digits over Southern California. Winds are expected to turn northeast Thursday night into Friday morning, which will shift the area with the strongest winds into Ventura County and the Santa Ana Canyon southward into portions of San Diego County. Expect winds of 15-25 mph with gusts to 40 mph in these areas late Thursday night through the day Friday. Northeast winds of 10-20 mph will also be possible along the central coast Friday afternoon. Temperatures will be much warmer Friday with highs in the 90s for many coastal and valley areas. Minimum RH will be in the single digits for most areas below 3,000 feet Friday and Saturday with poor recovery expected Friday night. Winds will decrease Friday evening, but light offshore flow will maintain hot temperatures into Saturday. A return of onshore flow will bring a slow cooling trend beginning Sunday. Most areas will see temperatures return to near normal with higher RH by next Tuesday.
